DETAILED ACTION

Allowable Subject Matter

Claims 1-15 are allowed.

The following is an examiner's statement of reasons for allowable subject matter:

The prior art of record fails to teach a multi band radio terminal with plurality of radio units corresponding each band and having a control unit which adds band switching information coming from a host device and transmitting the obtained information to radio unit wherein, the plurality of radio units themselves control on/off based on the information contained in the band switching information.

Friedmann (US 6,223,053) disclosed a multi-band radio terminal which includes a plurality of radio units corresponding to each bands and is capable of using said plurality of frequency bands. Friedmann also disclosed a control unit which turns on/off a radio unit operating at a particular frequency band. However, Friedman failed to teach a plurality of radio units where the radio units themselves control on or off of the radio units based on the frequency information coming from a host device.

Leyh (US 6,957,081) disclosed a multi-mode wireless communications device including a first transceiver having a continuous reception mode receiver coupled to a first antenna and a second transceiver having a second transmitter coupled to a second antenna. In one mode of operation, the continuous reception mode receiver receives an uncompressed downlink signal at the same time the other receiver receives a signal. In another mode of operation, the continuous reception mode receiver receives an uncompressed downlink signal at the same time a transmitter of the second transceiver

transmits a signal. However, Leyh failed to teach a plurality of radio units where the radio units themselves control on or off of the radio units based on the frequency information coming from a host device.

Therefore, claims 1-15 are allowed.
